

Measuring Security Effectiveness

Using social science research methods to measure security performance

How do we measure
security performance?

ipa
INNOVATIONS FOR
POVERTY ACTION

Static Code Analysis (SCA)

Experimental Group: received feedback from security SCA testing tool

Control Group: scanned, no feedback provided

Results: inconclusive, no significant differences between the groups

Security Effectiveness

What impact does our team have on improving security outcomes?

Compared level of involvement to pen-test results

Results: correlation between working with our team and fewer pen-test findings

Security Effectiveness 2

Experimental Group:
“intervention” of working with
our team

Control Group: observed, no
intervention

Results: study under way
